WHY WE ARE NOT JUST ANOTHER COPY

Our Market Gap

Existing Market	Missing Need	Our Solution	Customer Who Pays
Testing and packaging companies already serve AI and high-performance chips	AI chip testing capacity is still tight until about 2027	AI testing center	IC design companies and foundries, paying per test
Companies train their own staff; universities send out graduates	Not enough engineers; students are not job-ready for chip work	Training center	Semiconductor companies, paying to train or hire graduates
Taiwan's chip supply chain is built around large, established companies	Customers want a reliable local partner under U.S. and supply-chain pressure	Local testing + local talent	Chip designers who want a second, local option

We do not copy an existing testing company. We combine extra AI testing capacity with a training center that supplies our own engineers.
